

Rural Capital Grant

Meet Steve Earl MBE, Founder and Carly Earl, Company Director of Panel Graphic Limited

“

We work to the very highest standard for all our clients. Their products perform at the top level, so the highly-specified plastic parts that we supply need to match their exacting standards. They are for luxury items such as exclusive Bentleys, but also used in fire detector sensors and medical equipment, where consistency and quality is ultimately lifesaving.

As part of this expertise, we have developed a unique range of abrasion resistant and non-reflective surface coatings for plastic sheets and components. Thanks to the Rural Capital Grant, arranged by the Economic Growth team providing Business Builder support, we were able to invest in this industrial-grade pressure laminator, which will ensure precise and uniform application of technical polymer films. Consistency is crucial for all our clients, especially medical, where product reliability and strict standards are a must. Over the last five years, the support from South Norfolk Council has been an integral part of our growth. We would encourage any business to get to know the Economic Growth team and find out how they can help.

”

Steve Earl MBE started Panel Graphic in Loddon over 25 years ago and today employs a team of 38, including 5 family members. The family dogs turn up daily too.
