

2023 Air Quality Annual Status Report (ASR)

In fulfilment of Part IV of the Environment Act 1995
Local Air Quality Management, as amended by the
Environment Act 2021

Date: June 2023

Information	South Norfolk and Broadland Council Details
Local Authority Officer	Will Gorrod
Department	Environmental Protection
Address	Horizon Business Centre, Peachman Way, Norwich NR7 0WF
Telephone	01508 535369
E-mail	cpandeq@southnorfolkandbroadland.gov.uk
Report Reference Number	BDC/SNC ASR 2023
Date	June 2023

Executive Summary: Air Quality in Our Area

Air Quality in South Norfolk and Broadland

Air pollution is associated with a number of adverse health impacts. It is recognised as a contributing factor in the onset of heart disease and cancer. There are also emerging links between dementia and poor air quality. Additionally, air pollution particularly affects the most vulnerable in society: children, the elderly, and those with existing heart and lung conditions. There is also often a strong correlation with equalities issues because areas with poor air quality are also often less affluent areas^{1,2}.

The mortality burden of air pollution within the UK is equivalent to 29,000 to 43,000 deaths at typical ages³, with a total estimated healthcare cost to the NHS and social care of £157 million in 2017⁴.

In general, the air quality in both South Norfolk and Broadland is improving. Furthermore, there have been no recorded instances of air quality objectives being exceeded. The primary pollutant of concern is nitrogen dioxide (NO₂), mainly emitted from road vehicles. This is particularly noticeable in the suburban areas surrounding Norwich and our market towns.

Neither district has any designated Air Quality Management Areas (AQMAs).

The levels of NO₂ are monitored using diffusion tubes, with 30 locations in South Norfolk and 29 in Broadland being monitored.

We maintain close collaboration with colleagues in Public Health, the Norfolk Environmental Protection Air Quality Subgroup and as of 2023 the Countywide Air Quality Group. This new group aims to provide a forum to discuss, plan and implement ways to

¹ Public Health England. Air Quality: A Briefing for Directors of Public Health, 2017

⁴ Public Health England. Estimation of costs to the NHS and social care due to the health impacts of air pollution: summary report, May 2018

improve air quality across Norfolk from a number of partners including transport and medical professionals.

South Norfolk and Broadland Councils consider the impact of existing local industrial processes, as well as addressing the impact new developments might have on local air quality through the planning process.

Currently a detailed assessment for any pollutants is not deemed to be necessary. The Council will proceed to the next Annual Status report for 2024.

Actions to Improve Air Quality

Whilst air quality has improved significantly in recent decades, there are some areas where local action is needed to protect people and the environment from the effects of air pollution.

The Environmental Improvement Plan⁵ sets out actions that will drive continued improvements to air quality and to meet the new national interim and long-term PM_{2.5} targets. The National Air Quality Strategy, published in April 2023, provides more information on local authorities' responsibilities to work towards these new targets and reduce PM_{2.5} in their areas. The Road to Zero⁶ details the approach to reduce exhaust emissions from road transport through a number of mechanisms; this is extremely important given that the majority of Air Quality Management Areas (AQMAs) are designated due to elevated concentrations heavily influenced by transport emissions.

In an effort to further monitor and assess air quality and to meet the requirements of the National Air Quality Strategy, the Councils have initiated a trial involving the deployment of low cost indicative PM_{2.5} monitors. It is hoped that information from these monitors will assist in better identifying potential areas of concern.

South Norfolk and Broadland Councils take into account the potential consequences of existing local industrial processes by adhering to the LAPPC (Local Air Pollution Prevention and Control) and LA-IPPC (Local Authority Integrated Pollution Prevention and

⁵ Defra. Environmental Improvement Plan 2023, January 2023

⁶ DfT. The Road to Zero: Next steps towards cleaner road transport and delivering our Industrial Strategy, July 2018

Control) regimes. These regulatory frameworks ensure that the impact of industrial activities on air quality is thoroughly assessed and managed. Furthermore, air quality concerns are a considered part of the planning process.

The councils actively support and encourage grant applications from Norfolk County Council that aim to improve air quality across the region. While these grant applications primarily focus on Norwich City, the proposals have the potential to yield positive outcomes within South Norfolk and Broadland as well. For instance, the introduction of cargo bikes for use by local businesses. By supporting the facilitation of less polluting modes of transportation, the councils aim to reduce reliance on conventional vehicles and promote eco-friendly alternatives. This expansion not only contributes to reducing air pollution but also encourages healthier and more active lifestyles among residents.

Through a combination of robust industrial process regulations, implementation of indicative monitors, and support for grant applications to provide sustainable transport, the councils are actively working towards improving air quality.

Conclusions and Priorities

All our NO₂ results for both authorities are below the air quality objective thresholds. As such, a detailed assessment is not required for any pollutants and the Council will progress to the next Annual Status report for 2024.

Levels of NO₂ generally remain lower than before the Covid 19 pandemic and are on the whole trending downwards.

The location of air quality monitoring points is continually being reviewed and tubes will be relocated as appropriate. In addition, further monitoring points will be added if required. South Norfolk and Broadland Councils.

Average background PM_{2.5} concentration projections for each council show that both councils are already below the Environment Act 2021 annual mean concentration target for 2040.

Implementation of indicative monitors to measure PM_{2.5} is being trialled with the potential to buy a number of units in the future.

Since 2022 we have undertaken proactive education work focussing on the burning of wood as a secondary heating source and will continue to inform our residents about this.

Air Quality is also identified in our Council's Environmental Strategies with the following actions identified:

- Proactive work with our partners and other stakeholders aiming to achieve a positive change to air quality, this could include, working with universities, bus, coach and taxi companies, haulage companies, schools and car sharing clubs.
- Raise awareness of air quality amongst our local businesses and residents.
- Pre-planning application support in more applications.
- Develop supplementary planning documents for air quality.

Local Engagement and How to get Involved

For further information on air quality please contact us at:

cpandeq@southnorfolkandbroadland.gov.uk

If the public would like to find out more about air quality in general, there are a number of resources available. These include:

<https://uk-air.defra.gov.uk/> (UK government air quality)

www.airqualityengland.co.uk (A quick reference to air quality information for a variety of local authority areas across England)

www.metoffice.gov.uk/guide/weather/air-quality (Met Office air quality web page)

People can help improve air quality by:

- Walking and cycling instead of driving where possible,
- If using a car don't leave the engine running in queues or while waiting for someone.
- Looking for sustainable home energy suppliers who don't use fossil fuel.
- Avoiding burning at home
- Planting more trees and greenery

Local Responsibilities and Commitment

This ASR was prepared by the Environmental Protection Department at South Norfolk and Broadland with the support and agreement of the following officers and departments:

Officers involved in the preparation of the ASR

Will Gorrod - Environmental Management Officer

This ASR has been approved by:

Stewart Petrie – Environmental Protection Manager

A handwritten signature in brown ink, appearing to read 'S Petrie', with a long horizontal flourish extending to the right.

This ASR has been signed off by a Director of Public Health.

A handwritten signature in black ink, appearing to read 'Keith Mawson', with a stylized 'M' and 'W'.

Keith Mawson Advanced Public Health Officer
On behalf of Norfolk County Council Public Health

If you have any comments on this ASR please send them to Will Gorrod at:

1 Local Air Quality Management

This report provides an overview of air quality in South Norfolk and Broadland during 2022. It fulfils the requirements of Local Air Quality Management (LAQM) as set out in Part IV of the Environment Act (1995), as amended by the Environment Act (2021), and the relevant Policy and Technical Guidance documents.

The LAQM process places an obligation on all local authorities to regularly review and assess air quality in their areas, and to determine whether or not the air quality objectives are likely to be achieved. Where an exceedance is considered likely the local authority must declare an Air Quality Management Area (AQMA) and prepare an Air Quality Action Plan (AQAP) setting out the measures it intends to put in place in order to achieve and maintain the objectives and the dates by which each measure will be carried out. This Annual Status Report (ASR) is an annual requirement showing the strategies employed by South Norfolk and Broadland Councils to improve air quality and any progress that has been made.

The statutory air quality objectives applicable to LAQM in England are presented in Table E.1.

2 Actions to Improve Air Quality

Air Quality Management Areas

Air Quality Management Areas (AQMAs) are declared when there is an exceedance or likely exceedance of an air quality objective. After declaration, the authority should prepare an Air Quality Action Plan (AQAP) within 18 months. The AQAP should specify how air quality targets will be achieved and maintained, and provide dates by which measures will be carried out.

South Norfolk and Broadland Councils currently do not have any declared AQMAs

Progress and Impact of Measures to address Air Quality in South Norfolk and Broadland

Defra's appraisal of last year's ASR concluded the following:

On the basis of the evidence provided by the local authority the conclusions reached are **accepted** for all sources and pollutants. The next step is for BDC and SNDC to submit an Annual Status Report in 2023.

Commentary:

1. Trend graphs have been provided for all monitoring data including diffusion tubes, which is commended.
2. The Councils have provided clear and accurate mapping of the diffusion tube network, which is commended.
3. Comments from last year's ASR have been mentioned and most have been addressed. We highly encourage the Councils to continue to do this in future ASRs.
4. The NO₂ concentrations in BDC and SNDC have continued to be well below the annual mean objective for NO₂, which is very encouraging.
5. The Councils are commended for their approach to further improving Air Quality in the absence of a formal AQAP. The Councils are highly encouraged to continue to identify additional means to address further air quality concerns in future reporting years.

6. The Councils have developed several new measures in place to address PM_{2.5} which is commended. The partnership with environmental monitoring and technology company “PlanetWatch” to launch a new pilot project in Long Stratton is welcomed. It would be extremely useful if the Councils could make reference to the Public Health Outcomes Framework and their relevant local indicator for PM_{2.5} in this section of the report for both BDC and SNDC. The fractions of mortality attributed to particulate air pollution (new method) as part of the Public Health Outcome Framework is available on Public Health England’s Website:

<https://fingertips.phe.org.uk/search/air%20pollution#page/0/qid/1/pat/6/par/E12000006/at/101/iid/30101/age/230/sex/4/cat/-1/ctp/-1/yr/1/cid/4/tbm/1>).

South Norfolk and Broadland councils have taken forward a number of direct measures during the current reporting year of 2023 in pursuit of improving local air quality. Details of all measures completed, in progress or planned are set out in Table 2.1. 14 measures are included within Table 2.1, with the type of measure and the progress South Norfolk and Broadland Councils have made during the reporting year of 2023 presented. Where there have been, or continue to be, barriers restricting the implementation of the measure, these are also presented within Table 2.1.

PM_{2.5} – Local Authority Approach to Reducing Emissions and/or Concentrations

As detailed in Policy Guidance LAQM.PG22 (Chapter 8), local authorities are expected to work towards reducing emissions and/or concentrations of PM_{2.5} (particulate matter with an aerodynamic diameter of 2.5µm or less). There is clear evidence that PM_{2.5} has a significant impact on human health, including premature mortality, allergic reactions, and cardiovascular diseases. The latest data on the fraction of mortality attributed to particulate air pollution in South Norfolk and Broadland, and how this compares to the average for England can be seen in the charts below (Source: The Public Health Outcome Framework, 2023).

Figure A.1 – Fraction of Mortality Attributable to Particulate Air Pollution (Broadland)

Figure A.2 – Fraction of Mortality Attributable to Particulate Air Pollution (South Norfolk)

Public Health Outcome Framework, 2023. Background annual average PM_{2.5} concentrations for the year of interest are modelled on a 1km x 1km grid using an air dispersion model, and calibrated using measured concentrations taken from background sites in Defra's Automatic Urban and Rural Network (<https://uk-air.defra.gov.uk/interactive-map>).

South Norfolk and Broadland Councils are taking the following measures to address PM_{2.5}:

- The Councils continue to ensure regular two-way engagement with representatives of the Office for Health Improvement and Social Care, and the Director of Public Health at Norfolk County Council.
- The Councils are building stronger working relationships with Public Health including encouraging active travel (walking, cycling) to reduce local vehicle use.
- We work with local industrial processes as part of our duties under the Integrated Pollution Prevention and Control Regulations to ensure local air quality is safeguarded.
- We review planning applications for new developments to ensure local air quality is considered via the planning regime.

The Environment Bill was passed in 2020 and subsequent Environment Act 2021 has been published. The Environment Act 2021 establishes a legally binding duty on

government to bring two new air quality targets into secondary legislation. This duty sits within the environmental target's framework outlined in the Environment Act (Part 1).

The air quality targets set under the Act are:

- Annual Mean Concentration Target ('concentration target') - a maximum concentration of $10\mu\text{g}/\text{m}^3$ to be met across England by 2040
- Population Exposure Reduction Target ('exposure target') - a 35% reduction in population exposure by 2040 (compared to a base year of 2018).

Broadland District Council and South Norfolk District Council have both referred to the DEFRA background concentration data to consider $\text{PM}_{2.5}$ levels across the districts. The data has been used to assess if the background concentrations are above the relevant air quality targets. Average background concentration projections for each council show that both councils are already below the Environment Act 2021 annual mean concentration target.

Figure A.3 - Projected South Norfolk $\text{PM}_{2.5}$ /Exceedances 2018-2030

Figure A.4 - Projected Broadland PM_{2.5}/Exceedances 2018-2030

In 2021 South Norfolk and Broadland Councils made a bid for funding from the DEFRA Air quality grant. This funding bid was to facilitate the purchase of low cost monitors that could detect PM_{2.5}. Unfortunately, the Councils were unsuccessful in the funding bid. Whilst low cost monitors do not have the standard of sensors necessary for use in the ASR, they have been identified as a viable option for indicative monitoring. Indicative monitoring would increase capability within the councils and provide valuable insight into future monitoring opportunities.

In 2022 South Norfolk Council partnered with the environmental monitoring and technology company “PlanetWatch” to launch a new pilot project in Long Stratton. PlanetWatch has provided the council with several of its innovative low cost monitors, each capable of providing “near-live” data about the amount of Nitrogen Dioxide and Particulate Matter in the air (including PM_{2.5}). This is a trial of these units but it is hoped that we can start to gather PM_{2.5} data and build a business case for purchasing such monitors in the future.

3 Air Quality Monitoring Data and Comparison with Air Quality Objectives and National Compliance

This section sets out the monitoring undertaken within 2022 by South Norfolk and Broadland Councils and how it compares with the relevant air quality objectives. In addition, monitoring results are presented for a five-year period between 2018 and 2022 to allow monitoring trends to be identified and discussed.

Summary of Monitoring Undertaken

3.1.1 Non-Automatic Monitoring Sites

South Norfolk and Broadland Councils undertook non- automatic (i.e. passive) monitoring of NO₂ at 59 sites during 2022 (30 in South Norfolk and 29 in Broadland). Table A.1 and A2 in Appendix A presents the details of the non-automatic sites.

Maps showing the location of the monitoring sites are provided in Appendix D. Further details on Quality Assurance/Quality Control (QA/QC) for the diffusion tubes, including bias adjustments and any other adjustments applied (e.g. annualisation and/or distance correction), are included in Appendix C.

Individual Pollutants

The air quality monitoring results presented in this section are, where relevant, adjusted for bias, annualisation (where the annual mean data capture is below 75% and greater than 25%), and distance correction. Further details on adjustments are provided in Appendix C.

3.1.2 Nitrogen Dioxide (NO₂)

Table A3 and Table A4 in Appendix A compare the ratified and adjusted monitored NO₂ annual mean concentrations for the past five years with the air quality objective of 40µg/m³. Note that the concentration data presented represents the concentration at the location of the monitoring site, following the application of bias adjustment and annualisation, as required (i.e. the values are exclusive of any consideration to fall-off with distance adjustment).

For diffusion tubes, the full 2022 dataset of monthly mean values is provided in Appendix B. Note that the concentration data presented in Table B.1 and Table B.2 includes distance corrected values, only where relevant.

There are no exceedances of the air quality objectives. Almost all annual mean concentrations in both districts are lower than in 2019 (before the Covid-19 pandemic).

☒ Annualisation has been conducted where data capture is <75% and >25% in line with LAQM.TG22.

☒ Diffusion tube data has been bias adjusted.

☒ Reported concentrations are those at the location of the monitoring site (bias adjusted and annualised, as required), i.e. prior to any fall-off with distance correction.

Notes:

The annual mean concentrations are presented as $\mu\text{g}/\text{m}^3$.

Exceedances of the NO₂ annual mean objective of 40 $\mu\text{g}/\text{m}^3$ are shown in **bold**.

NO₂ annual means exceeding 60 $\mu\text{g}/\text{m}^3$, indicating a potential exceedance of the NO₂ 1-hour mean objective are shown in **bold and underlined**.

Means for diffusion tubes have been corrected for bias. All means have been “annualised” as per LAQM.TG22 if valid data capture for the full calendar year is less than 75%. See Appendix C for details.

Concentrations are those at the location of monitoring and not those following any fall-off with distance adjustment.

(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.

(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).

- ☒ All erroneous data has been removed from the NO₂ diffusion tube dataset presented in Table B.1 (confirm by selecting in box).
- ☒ Annualisation has been conducted where data capture is <75% and >25% in line with LAQM.TG22 (confirm by selecting in box).
- ☐ Local bias adjustment factor used (confirm by selecting in box).
- ☒ National bias adjustment factor used (confirm by selecting in box).
- ☒ Where applicable, data has been distance corrected for relevant exposure in the final column (confirm by selecting in box).
- ☒ <Local Authority> confirm that all 2022 diffusion tube data has been uploaded to the Diffusion Tube Data Entry System (confirm by selecting in box).

Notes:

Exceedances of the NO₂ annual mean objective of 40µg/m³ are shown in **bold**.

NO₂ annual means exceeding 60µg/m³, indicating a potential exceedance of the NO₂ 1-hour mean objective are shown in **bold and underlined**.

See Appendix C for details on bias adjustment and annualisation.

Appendix C: Supporting Technical Information / Air Quality Monitoring Data QA/QC

New or Changed Sources Identified Within South Norfolk and Broadland During 2023

South Norfolk and Broadland Councils have not identified any new sources relating to air quality within the reporting year of 2022

Additional Air Quality Works Undertaken by South Norfolk and Broadland Councils During 2023

South Norfolk and Broadland has not completed any additional works within the reporting year of 2022

QA/QC of Diffusion Tube Monitoring

The supplier used for diffusion tube preparation and analysis within 2021 was Gradko International Ltd and the method of preparation was 20% TEA in water.

Monitoring was undertaken in accordance with the 2022 Diffusion Tube Monitoring Calendar.

Diffusion Tube Annualisation

All diffusion tube monitoring locations within South Norfolk and Broadland recorded data capture of 75% therefore it was not required to annualise any monitoring data. In addition, any sites with a data capture below 25% do not require annualisation.

Diffusion Tube Bias Adjustment Factors

The diffusion tube data presented within the 2023 ASR have been corrected for bias using an adjustment factor. Bias represents the overall tendency of the diffusion tubes to under or over-read relative to the reference chemiluminescence analyser. LAQM.TG22 provides

guidance with regard to the application of a bias adjustment factor to correct diffusion tube monitoring. Triplicate co-location studies can be used to determine a local bias factor based on the comparison of diffusion tube results with data taken from NO_x/NO₂ continuous analysers. Alternatively, the national database of diffusion tube co-location surveys provides bias factors for the relevant laboratory and preparation method.

South Norfolk and Broadland Councils have applied a national bias adjustment factor of 0.83 to the 2022 monitoring data. A summary of bias adjustment factors used by South Norfolk and Broadland Councils over the past five years is presented in Table C.. As per table C.1, national spreadsheet version 03/23 has been used. 27 studies were applicable to this national factor.

Table C.1 – Bias Adjustment Factor

Monitoring Year	Local or National	If National, Version of National Spreadsheet	Adjustment Factor
2022	National	03/23	0.83
2021	National	03/22	0.84
2020	National	03/21	0.81
2019	National	03/20	0.93
2018	National	03/19	0.93

NO₂ Fall-off with Distance from the Road

No diffusion tube NO₂ monitoring locations within South Norfolk and Broadland Council's required distance correction during 2022.

Appendix D: Map(s) of Monitoring Locations and AQMAs

Appendix E: Summary of Air Quality Objectives in England

Table E.1 – Air Quality Objectives in England⁷

Pollutant	Air Quality Objective: Concentration	Air Quality Objective: Measured as
Nitrogen Dioxide (NO ₂)	200µg/m ³ not to be exceeded more than 18 times a year	1-hour mean
Nitrogen Dioxide (NO ₂)	40µg/m ³	Annual mean
Particulate Matter (PM ₁₀)	50µg/m ³ , not to be exceeded more than 35 times a year	24-hour mean
Particulate Matter (PM ₁₀)	40µg/m ³	Annual mean
Sulphur Dioxide (SO ₂)	350µg/m ³ , not to be exceeded more than 24 times a year	1-hour mean
Sulphur Dioxide (SO ₂)	125µg/m ³ , not to be exceeded more than 3 times a year	24-hour mean
Sulphur Dioxide (SO ₂)	266µg/m ³ , not to be exceeded more than 35 times a year	15-minute mean

⁷ The units are in micrograms of pollutant per cubic metre of air (µg/m³).

Glossary of Terms

Abbreviation	Description
AQAP	Air Quality Action Plan - A detailed description of measures, outcomes, achievement dates and implementation methods, showing how the local authority intends to achieve air quality limit values'
AQMA	Air Quality Management Area – An area where air pollutant concentrations exceed / are likely to exceed the relevant air quality objectives. AQMAs are declared for specific pollutants and objectives
ASR	Annual Status Report
Defra	Department for Environment, Food and Rural Affairs
DMRB	Design Manual for Roads and Bridges – Air quality screening tool produced by National Highways
EU	European Union
FDMS	Filter Dynamics Measurement System
LAQM	Local Air Quality Management
NO ₂	Nitrogen Dioxide
NO _x	Nitrogen Oxides
PM ₁₀	Airborne particulate matter with an aerodynamic diameter of 10µm or less
PM _{2.5}	Airborne particulate matter with an aerodynamic diameter of 2.5µm or less
QA/QC	Quality Assurance and Quality Control
SO ₂	Sulphur Dioxide
